

How Royal Berkshire Hospital Overcame COVID-19 Setbacks with BenQ Display Solutions

Facts at a Glance

Segment: Healthcare

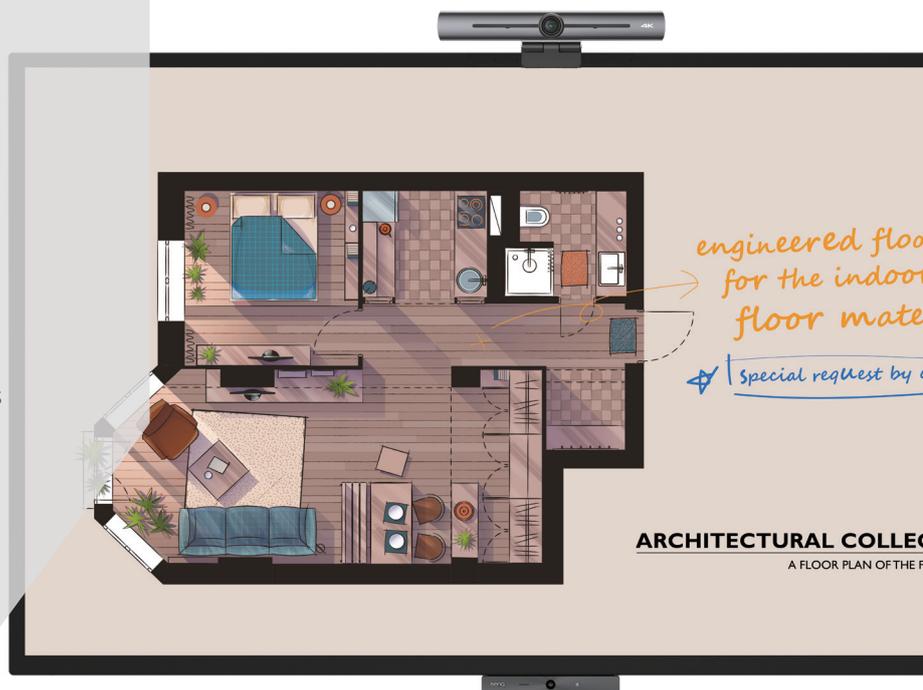

Year of Completion: 2020

Project

RBH uses BenQ DuoBoard to have socially distanced group discussions.

BenQ Solution Used

- DuoBoard 65" corporate interactive displays
- IE1004-B Intel® Core™ i7 OPS slot-in PCs
- DVY22 smart 4K conference cameras
- WDR02U Wi-Fi Bluetooth USB adapters

Issue

RBH needed a solution that could connect multiple experts from different locations for large monthly sync ups. It was critical for them to be all on the same page and well-equipped to meet their patients' needs. For this reason, they sought out BenQ.

Solution

RBH originally acquired BenQ DuoBoards because they were able to fulfil their meeting requirements. Since the DuoBoard has built-in cloud whiteboarding, RBH's team no longer needed flipcharts or physical whiteboards. The large-format displays gave them a wider screen for their presentations - a feature that helped with their internal COVID-prevention efforts.

Result

With how well their DuoBoards are facilitating hybrid work and cross-site collaboration, RBH are now considering making their current setup a permanent one. It saves them the time and effort required to set up monthly in-person meetings, makes their teams more agile, and allows them to easily observe COVID-19 protocols.
